Adobe's Make Video is a relatively new, free update to Adobe Make (formerly Magisto). It introduces the ability to input audio, music and home videos directly into Adobe Composition. In short, Adobe Composition is designed for video people. You can write and edit scripts in Adobe Composition, use scripting to automate media composition, choose a timeline, add keyframes, and add or replace audio, video, images, home videos and even soundtracks. Then, by opening the same composition in Photoshop Elements Publisher, you can import Adobe Composition scripts and then edit the video. In this way, you can have your videos created by someone else, but still add your edits and/or graphics, for example, adding text art, illustrated backgrounds, or adding voiceovers.

There is a way to quickly crop your image into a completely different look! You can simply select the area that you want to use and reduce the selection to the size. Or, with the newly redesigned tool, you can use the Crop tool to put your mouse in the right place and crop your image to your desired size. You can use the new Measuring Lines button to make the crop measurements. You can do this very easily even if you do not know how to read a ruler. You simply make your measurements and click the button to crop. The new Crop tool is really a dream come true for those who love vintage photography. You no longer need to use film negatives to crop your photos. So, if you are wondering how to use the new resize tool that was introduced in Photoshop Elements 11 and Photoshop CC, you will find that it is a simple way to make your images a different size, bearing in mind that you can do it quickly. Yes, you can make pixel perfect images by using the manual mode. It's the most difficult to be done. If you just want to shoot, then the automatic mode will do the work for you on most of the time. If you are a designer—or for that matter if you are a graphic designer, an illustrator, or a designer at another type of job—you will find that the new Blend Modes are new to Photoshop CC. You can easily add a mask to an image by doing a combination of Gaussian Blur, and you can even apply the mask over an image in the Background layer as it allows you to blend Photoshop into the background or add a background if you wish. You can make your picture look like a poster or even something abstract by making a selection with the Magic Wand tool. In addition, you can find other tools in there to make a photo look like a painting or a collage. There are several methods to use different layers by following the steps in this

exciting new update that has been produced by Adobe. Even if you are not a graphic designer, you can enjoy the new painting tools.
